EA Case Management Practice Software Case Management Tracking System - CMTS

CMTS DEVELOPMENT: 2005– 2009

The CMTS program was developed following research to locate software that would satisfy the needs of a Medical and Vocational Rehabilitation practice. There are programs available for medical case management, legal office practice and physician office practice. The CMTS program was developed specifically for use within a Medical and Vocational Rehabilitation Case Management practice. The Software Developer, Bill England, was previously involved with in-house software development projects with Travelers Medical Management Services (TMMS: 1988- 1997). He served as the National Director of Client Services for two years at Careware (1997– 1999). Careware developed, installed and supported medical case management software for HMOs, MCOs and hospitals. In 2005 programming code was started to develop the “*EA Case Management Practice Software*”. The software program is now referred to as the **Case Management Tracking System** or the **CMTS** program. The **Case Load**, **Case** and **Invoice** features have been operational for over 4 years. Programming for **Case Notes**, **Accounts Receivable** and **Contacts** functions were finalized in 2007. The CMTS programming code copyright application was accepted as a **Registered Copyright** on October 15, 2007. The first CMTS Software License was sold in 2007. England & Associates remains the sole owner of the CMTS program. Installation and support are provided by the developer.

CMTS LICENSURE:

The CMTS program is available with a one year **CMTS Software Support License**. Installation and Training are provided as part of the original License contract. Renewal support is available to insure continued updates with new features. The CMTS program is sold as an individual license, with or without multiple site unit installation. Multiple units or work station installations are sold on a declining cost scale. Work Stations may be added on a prorated basis at any time. Licensure will insure the integrity of the software, support and continuity of updates. Annual Renewals of the License are 10% of the original purchase price.

CMTS INSTALLATION & TRAINING:

This software may be installed on an individual PC or Network. The installation is completed on-site or on-line by one of our Programmers. Support is provided by phone and through the internet. **Customizations** are available with our Programmer. **Technical Service Requests** (TSRs) are addressed via e-mail and phone contact. Our incremental development process has eliminated recurring errors. **Training** provided to new Users will address **Implementation** and the use of primary **CMTS** features. Implementation may suggest methods for maximizing office practice and case work efficiency with case notes, contacts, invoicing and accounts receivable tracking. **CMTS Software Enhancements** for office practice and case work will be made available to Licensed Users periodically through the update process. Expired or unlicensed Users will not be supported. We are currently involved with the final development of **CMTS Version 2.0** with enhancements for case contacts, contact tracking, carrier and TPA identification. The Florida DWC-21 invoice data base file lay-outs will be modified and expanded to facilitate mandated electronic submission.

CMTS for Case Managers, Administrators, Supervisors, Medical & Vocational Rehabilitation Professionals

CMTS OPERATING SYSTEM & SOFTWARE STABILITY

The CMTS programming code was developed for the Windows XP Operating System. The CMTS Software builds upon the proven data base software of Microsoft Access. CMTS now operates within XP Professional, XP Home Edition or Vista. It will operate with Access 2003 or 2007. CMTS has been operating continuously without interruption in a live office practice environment with 6 case managers. Its greatest value is that of reducing administrative time and thereby allowing case managers to do what they do best "manage case work" and "provide services" to their Clients. The largest current live installation has maximized over \$60K in invoice transactions monthly. There is technically no limit to the invoicing, case load, case or contacts data base growth with multiple users and sites. CMTS is an extremely stable program built upon a proven operating system. This software may replace the necessity to use multiple programs to accomplish typical case management tasks required for case notes, case load management, key contact updates, monthly invoicing and data base management. The CMTS program offers an opportunity to use case notes electronically as an exclusive media, supplemental documentation or in combination with traditional case hand-written log notes to accommodate the end User's particular case work and preferences.

CMTS INSTALLATION FLEXIBILITY:

The CMTS program is built to grow with your office. It may be installed as a single user, single PC program, with the future capability to expand to multiple users and a network environment. The CMTS program is priced on a scale to accommodate large or small users. Individual users may expand to accommodate a growth in case managers and users with one Work Station at a time. The largest current installation operates on a Network with 5 primary users, 3 LapTops and 3 remote users. Each user has complete access to the data base and their case load. The CMTS program provides individual, group or office ad hoc reports, weekly, monthly, annually or within User selected date ranges. Reports may be generated to monitor invoiced professional hours by the case, office case load, referral source or individual case manager.

CMTS DEMONSTRATIONS: On-Line, Remote Internet Access or On-Site

On-site or on-line Demonstrations are available upon request. Typically 30– 60 minutes on-line will provide a basic overview of significant screens and functionality. Extended on-site demonstrations offer the opportunity to address demonstrations of invoicing, case tracking and use of the contact functions for selective marketing.

On-line demonstrations require a phone line for the conference call, your computer and internet access. In your profession "time is money", you can save time, reduce administrative time, and let the CMTS program pay for itself. **Call today for a Demonstration of the CMTS program: (727) 347-0386.** If you purchase your CMTS software, prior to July 1, 2009, mention this newsletter insert and receive a 10% purchase discount.
